Nevada Board of Dispensing Opticians
Licensing Examination

General Information

The State Board Licensing Examination will be held at the College of Southern Nevada, Charleston Campus: 6375 West Charleston Boulevard, Las Vegas, NV 89146. The examination will take place from 8:00 a.m. until 6:00 p.m. Please plan to arrive at least 15 minutes prior to exam time and bring a lunch with you as you will have only 30 minutes to eat. When you arrive, report to Building A and a proctor will direct you to an exam room.

Important: You must show a government-issued photo ID such as a driver's license or passport before you will be allowed to take the exam.

The exam will consist of the following sections: 1) neutralization of glasses and contacts, 2) optical theory, 3) dispensing, 4) Nevada law, 5) lens identification, 6) anatomy & physiology (written/slides), and 7) instrumentation.

What to Bring to the Exam

The following will not be supplied; applicants must bring these items to the examination:
- PD ruler
- Pal layout charts
- Non-programmable scientific calculator
- Vis a vis pens
- #2 pencil Lunch

The following will be supplied, but if applicants wish, they may bring these items to the examination:
- Base curve clock
- Lens caliper
- Magnifying loop
- V gauge
- Contact lens thickness gauge

Examination Percentages

Suggested Study Areas: Ophthalmic

**Mechanical Optics**
1. Slab-off grindings
2. Lensometer readings
3. Oblique powers
4. Box measurements
5. Lens styles
6. Rx transpositions
7. Sagital depth
8. Lens treatment
9. Terminology
10. Dioptic curves
   a. convex
   b. concave
11. Focal length
12. Image jump-calculations
13. Telescope
14. Abbrevations

**Ophthalmic Optics**
1. Magnifications
2. Induced prism & prismatic effect
3. Focal length
4. Lens-styles & characteristics
5. Prism
6. Visual errors-descriptions
7. History of spectacles
8. Angle of resolution
9. Lensomter readings
10. Lens clock use
11. Minimal blank size
12. ANSI standards
13. Oblique prism formula
14. Amplitude of Accommodations
15. Cataract treatments
16. Prefix definitions
17. Prentice Rule
18. Snellens Chart

**Dispensing Procedures**
1. Minimum blank size
2. Instruments
3. Eyeglass fittings-cause and effect
4. Frame materials – metal Zyl
5. Frames out of alignment terminology
6. Lens color

**Math**
1. Prism
2. Decentration
3. Vertex formula
   a. Compensation
   b. Effective
4. Slab-off
5. Sagital depths
6. Magnification formulas
7. Accommodative amplitude

**Anatomy**
1. Terms for components of the eye
2. Components of the eye
   a. Functions
   b. Characteristics

**Law – Statutes and Regulations**
1. Board members: appointment and qualifications
2. Qualifications for licensing
3. Responsibilities of licensed opticians
4. Disciplinary action by the Board

**Natures and Properties of Light**
1. Terms & descriptions of light
2. Wave lengths
3. Light characteristics
4. Index of refraction formula
5. Focal length formula
**Ophthalmic References**

The following reference texts are available in the Clark County Library, the College of Southern Nevada (Charleston Campus) Health Sciences Department, and the Truckee Meadows Community College Library ophthalmic reference section:

4. Physics—Cliff Notes Version
5. Studies in Optics – A. A. Michelson
7. Introduction to Ophthalmic Optics – SOLA Optical Publication – Dr. James Sheedy & Darryl Meister
10. Optics, the Science of Vision – Vasco Ronchi
11. Optics & the Theory of Electrons – Wolfgang Pauli
15. The Complete Book of Holograms – Joseph Kasper & Steven Feller
17. Introduction to Light, The Physics of Light, Vision & Color – Gary Waldman
18. Dispensing Pediatric Eyewear-Kathryn Schramm
19. Introduction to the Optics of the Eye – David Gross & Roger West
21. Fine Art of Prescribing Glasses Without Making a Spectacle of Yourself – Milder & Rubin
Suggested Study Areas: Contact Lens

1. All aspects of keratometer, knowing how to take K readings
2. Neutralizing hard and gas permeable lenses
3. Understanding the concepts and use of the radioscope
4. Purposes of the slit-lamp, understanding the concepts of the variety of illuminations
5. Anatomy and physiology of the eye
6. Identification of fluorescene patterns with rigid lens
7. Understanding lens materials and their uses
8. Identification of lens parameters to be used with different prescriptions
9. Identifying and understanding "with the rule" and "against the rule"
10. Identifying and understanding keratoconus
11. Lens designs and their applications
12. Identifying and treating progressive myopia
13. Over-refraction of the trial lens
14. Refitting of hydrogel and PMMA wearers
15. Nevada law
16. Identifying basic contact lens symptoms
17. Understanding a dry eye in relation to contact lenses
18. Be able to identify all staining patterns and how each relate to contact lens fitting
19. Computing vertex distance
20. Transposing diopters to millimeters
